Pixelogic Media
Smart Villages Company,
Al Giza Desert, Giza

To: Pixelogic Media

I am excited to apply for Senior Software Development Engineer in Test position in your team. I am an enthusiastic Software testing and development, and I am dedicated to all aspects about software testing including manual testing, automation testing and API testing. I would love to work for Pixelogic Media and contribute to the mission of democratizing education by creating an online experience that can inspire a wider audience.

Over the last three years that I have been employed as a professional Software Test Engineer, I have worked for one of the better-known software companies in the region, TPay Mobile. In this position, I worked in manual testing, automation testing, BI testing, API testing and data warehouse testing. This involved working with teams of software developers, BI developers, data scientists and software testing engineers. I was able to know my profound knowledge of software, my postgraduate diploma from the iTi in software testing and quality assurance, my experience as a software developer for one year and my strong hands-on problem-solving experience, and finally my great analytical skills to offer success every time. I know I could offer the same set of valuable traits and experience to Pixelogic Media.

Thanks for reviewing this cover letter and resume. I can be reached out for any questions or interest for employment in the contact information offered above. I look forward to your response, at your earliest convenience regarding this position of Software Development Engineer in Test.

Thanks,

Aya
